

Docket No. RSW920010011US1

ABSTRACT OF THE DISCLOSURE

METHOD AND SYSTEM FOR SPECIFYING A CACHE POLICY FOR CACHING WEB PAGES WHICH INCLUDE DYNAMIC CONTENT

A data processing system and method are described
5 for specifying a cache policy for caching pages which
include dynamic content. A user is permitted to request
a page to be displayed. The page includes multiple
fragments. An application is executed which generates
those fragments. The generation of fragments is are
10 unchanged by the caching policy. Each one of the
servlets is executed to present a different one of the
fragments. Caching of the page fragments can now be
processed separately from the execution of the
application.
